Strip Curtains

The clear solution for every door opening

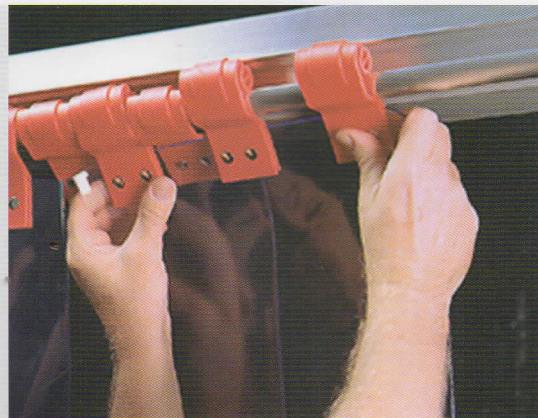

SVF

Flex strip curtains – the space-saving solution.

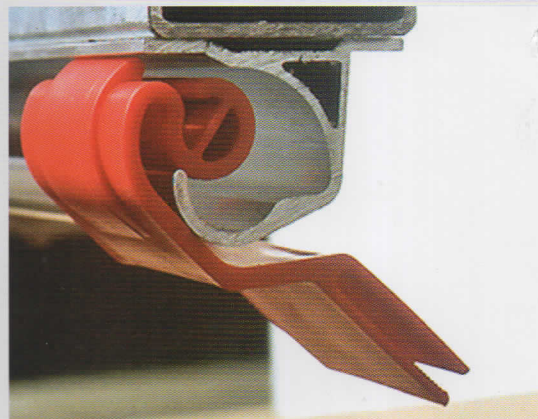

Minimal energy loss

Hörmann's Flex strip curtains are especially suitable for use as inexpensive doors for large warehouse openings. The durable UPVC strips provide effective sealing to a large area and can be opened up just enough to accommodate the width of a vehicle or load. This reduces temperature loss to a minimum, even with heavy through-traffic, thus saving energy. The first-class transparency of Flex strip curtains improves lighting conditions and reduces lighting costs. Suitable for use in food or medication production and in cold store areas.

The clip in system

This attaching system makes fitting our strip curtains quick and easy. The plastic clip with its riveted UPVC strip can simply be hooked into the aluminum profile rail – without any extra tools. Clips and UPVC strips are delivered as finished units. The strips can be easily unhooked and exchanged if necessary.

Versions

- Aluminum rail
- The UPVC strips are hooked directly into an aluminum rail and can freely swing 180°.

Size range

Strip material 200 / material thickness 2 mm

Max. fitting height, interior 2000 mm
